

Terrace on the Park Pattern Installation Best Practices and Tips.

Part Numbers: 16215,16315,16515

The following instructions reviews the best practices found when installing the 'Terrace on the Park' pattern mosaic from the Chapter 16 'Park Place' collection. Since the 'Terrace on the Park' pattern mosaic is designed to be installed with virtually no grout joint, and is a continuous pattern without "fingers," there are a few extra precautions needed to ensure your installation goes as seamlessly and as easily as possible.

1 Pick a starting orientation

The Terrace on the Park mosaics are designed to be a continuous pattern without "fingers" to assist in it orientation. Therefore extra care must be taken to ensure that the proper pattern is maintained. Determine which way you would like to start the pattern and stick-with-it. As you can see on the right, in our example, we chose to begin the pattern where the two longest horizontal pieces are always at the top.

2 Install Mosaic Piece Maintaining same orientation

You want pay extra attention that you are always maintaining the same orientation when installing this piece. Additionally the pattern must be laid out as a stacked grid ensuring pattern elements continue/finish the element from the tile that proceeded it. This pattern is also designed to be practically "butt jointed," make sure the tile maintains grout joints that are as tight as possible (see exploded view below). This will ensure a clean continuous look.

3 Grout using a non-sanded grout

This pattern is designed to have very tight grout joints between the grout joints and small dot elements. We recommend using a non-sanded grout as it will be able to get into the very small joints. Follow the instructions provided by chosen grout manufacturer for best installation results. ***As all stones, we recomend sealing prior to grouting to ensure a easier cleaning process during and after grouting.***
